

Practice: Extract Hypothesis

Owlet Case Study

Extract Hypotheses

Total time: 15 minutes

Owlet's business model and value proposition went through several iterations until they got their idea right. Watch the first part of the case study to learn about the original idea and what hypotheses they set out to test.

Directions:

1. Watch the video snippet.
2. Download a [Business Model Canvas](#) to sketch out the first iteration of Owlet's business model.
3. Download a [Value Proposition Canvas](#) to sketch out the two customer segments they identified (nurses and hospital administrators), and how they intended to create value for each.
4. Extract the hypotheses they set out to test, one for each of the customer segments. Write them down in the workbook below the video.
