

Practice: Desirability Experiments

Owlet Case Study

Which Experiment Next?

Total time: 20 minutes

After learning that nurses and hospital administrators are not the right audience for their idea, Owlet did a pivot. Watch the second part of the case study to learn about Owlet’s updated business model, their new customer segment, and new value proposition.

Directions:

- 1. Watch the video snippet.
- 2. Download a [Value Proposition Canvas](#) to sketch out the new customer segment they identified (parents), and how they intended to create value for them.
- 3. What are the main hypotheses related to desirability? Which first experiments could they conduct to test these hypotheses? Write down the hypotheses, experiments, metrics and success criteria in the workbook below the video. You can also download a [Test Card](#) for the design of your experiments.
