

Owlet Learn from Evidence

Sample Solution

www.getwsodo.com

Test Card

Interview Nurses

Deadline

Assigned to

Duration

STEP 1: HYPOTHESIS

We believe that

wireless pulse oximetry more convenient than traditional pulse oximetry

STEP 2: TEST

To verify that, we will

interview nurses

STEP 3: METRIC

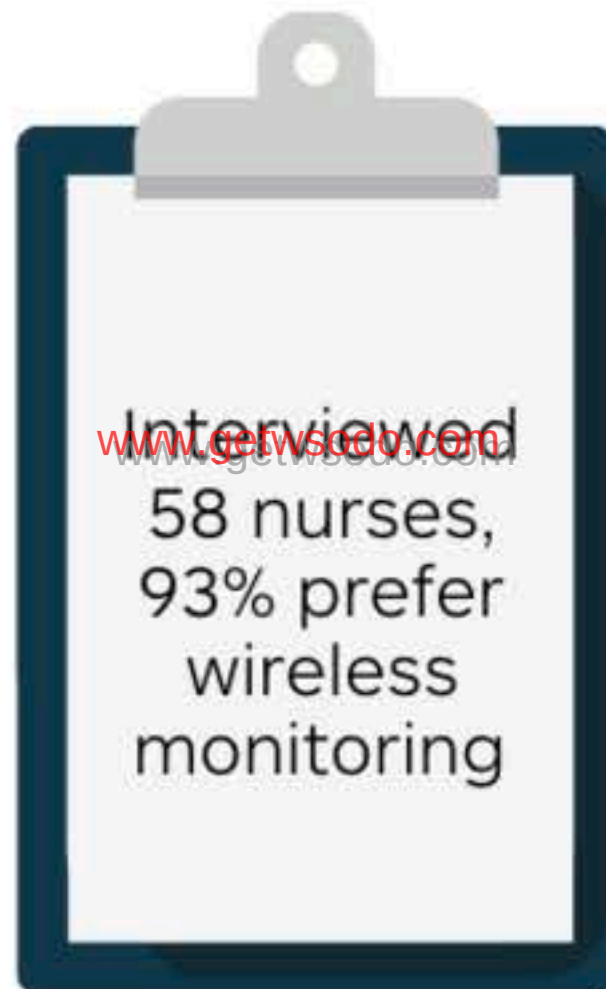

And measure

percentage of positive feedback

STEP 4: CRITERIA

We are right if

more than 60% have positive feedback

Learning Card

Interview Nurses

Date of Learning

Person Responsible

STEP 1: HYPOTHESIS

We believed that

wireless pulse oximetry more convenient than traditional pulse oximetry

STEP 2: OBSERVATION

We observed

Of 58 interviewed nurses, 93% preferred wireless monitoring

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

Evidence supports hypothesis

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

Test Card

Interview Hospital Administrators

Assigned to

Duration

STEP 1: HYPOTHESIS

We believe that

wireless pulse oximetry more convenient than traditional pulse oximetry

STEP 2: TEST

To verify that, we will

interview hospital administrators

STEP 3: METRIC

And measure

percentage of positive feedback

STEP 4: CRITERIA

We are right if

more than 60% have positive feedback

Learning Card

Interview Hospital Administrators

Person Responsible

STEP 1: HYPOTHESIS

We believed that

wireless pulse oximetry more convenient than traditional pulse oximetry

STEP 2: OBSERVATION

We observed

0% of interviewed hospital admins are ready to pay more for wireless monitoring

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

Evidence doesn't supports hypothesis. New insight: Ease of use is not a pain, if it isn't cost-effective.

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

Test Card

Interview Mothers

Deadline

Assigned to

Duration

STEP 1: HYPOTHESIS

We believe that

We believe that parents are ready to adopt a wireless baby alarm

STEP 2: TEST

To verify that, we will

Interview parents

STEP 3: METRIC

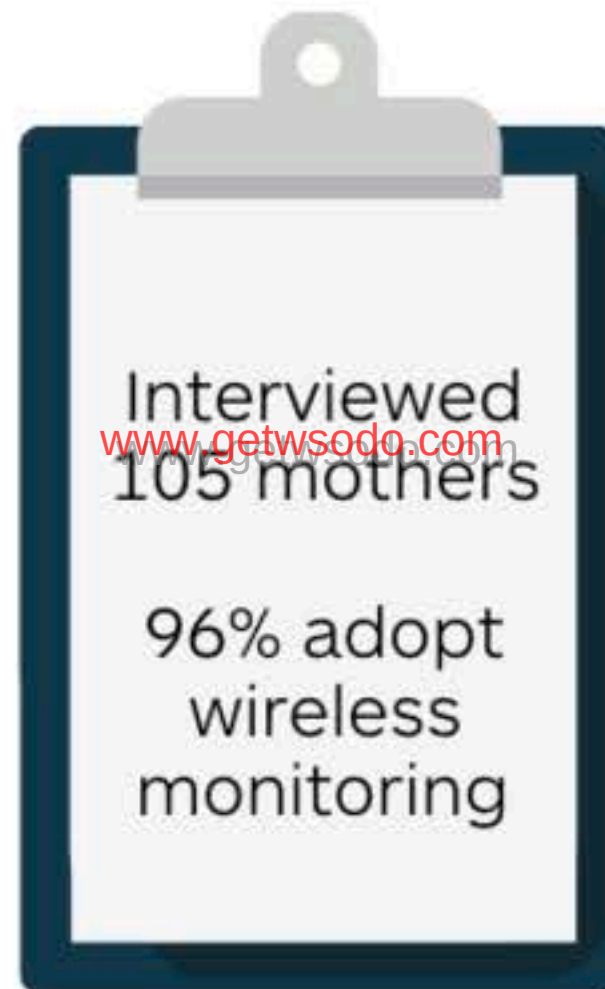

And measure

Percentage of adopting parents

STEP 4: CRITERIA

We are right if

More than 75% would adopt a wireless baby alarm

Learning Card

Interview Mothers

Date of Learning

Person Responsible

STEP 1: HYPOTHESIS

We believed that

We believe that parents are ready to adopt and buy a wireless baby alarm

STEP 2: OBSERVATION

We observed

Of 105 interviewed mothers, 96% adopt wireless monitoring

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

Evidence supports hypothesis

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

Test Card

MVP (Video on Website) Deadline

Assigned to

Duration

STEP 1: HYPOTHESIS

We believe that

A smart bootie is convenient and easy to use for monitoring

STEP 2: TEST

To verify that, we will

Build a low-fi MVP, with a video on a website

STEP 3: METRIC

And measure

Number of positive comments

STEP 4: CRITERIA

We are right if

We receive more than 100 positive comments

Learning Card

MVP (Video on Website) Place of Learning

Person Responsible

STEP 1: HYPOTHESIS

We believed that

A smart bootie is convenient and easy to use for monitoring

STEP 2: OBSERVATION

We observed

17,000 views, 5,500 shares on Facebook, 500 positive comments

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

Evidence supports hypothesis

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

Test Card

Survey Mothers (1)

Deadline

Assigned to

Duration

STEP 1: HYPOTHESIS

We believe that

Parents want to rent the product,
versus buy at \$200 sales price

STEP 2: TEST

To verify that, we will

Conduct a survey with mothers and ask
what they'd expect to pay

STEP 3: METRIC

And measure

How much mothers
pay for a baby alarm

STEP 4: CRITERIA

We are right if

The average price mothers would pay
for a baby alarm is lower than \$200

Learning Card

Survey Mothers (1)

Date of Learning

Person Responsible

STEP 1: HYPOTHESIS

We believed that

Parents want to rent the product,
versus buy at \$200 sales price

STEP 2: OBSERVATION

We observed

mothers would pay an average price
of \$92 (surveyed 105 mothers)

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

Evidence supports hypothesis

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

Interview Baby Store Owners

Assigned to

Duration

STEP 1: HYPOTHESIS

We believe that

Parents want to rent the product, versus buy at \$200 sales price

STEP 2: TEST

To verify that, we will

Interview baby store owners

STEP 3: METRIC

And measure

How much mothers pay for a baby alarm

STEP 4: CRITERIA

We are right if

The average price mothers would pay for a baby alarm is lower than \$200

Interview Baby Store Owners

Person Responsible

STEP 1: HYPOTHESIS

We believed that

Parents want to rent the product, versus buy at \$200 sales price

STEP 2: OBSERVATION

We observed

average price for similar products is ~\$200 (interviewed 33 baby stores)

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

Evidence is unclear

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

Test Card

Survey Mothers (2)

Deadline

Assigned to

Duration

STEP 1: HYPOTHESIS

We believe that

Parents want to rent the product,
versus buy at \$200 sales price

STEP 2: TEST

To verify that, we will

Conduct a survey with mothers and ask
the maximum they would pay

STEP 3: METRIC

And measure

How much mothers
pay for a baby alarm

STEP 4: CRITERIA

We are right if

The average price mothers would pay
for a baby alarm is lower than \$200

surveyed 139 mothers

average maximum price \$182

surveyed 40 mothers

average maximum price \$214

Learning Card

Survey Mothers (2)

Date of Learning

Person Responsible

STEP 1: HYPOTHESIS

We believed that

Parents want to rent the product,
versus buy at \$200 sales price

STEP 2: OBSERVATION

We observed

mothers would pay a maximum price
of \$182 (139 mothers) and \$214 (40
mothers)

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

Evidence is unclear

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

Test Card

A/B Test Pricing

Deadline

Assigned to

Duration

STEP 1: HYPOTHESIS

We believe that

Parents want to rent the product,
versus buy at \$200 sales price

STEP 2: TEST

To verify that, we will

A/B test

STEP 3: METRIC

And measure

Percentage for A vs. B

STEP 4: CRITERIA

We are right if

The average price mothers would pay
for a baby alarm is lower than \$200

Learning Card

A/B Test Pricing

Date of Learning

Person Responsible

STEP 1: HYPOTHESIS

We believed that

Parents want to rent the product,
versus buy at \$200 sales price

STEP 2: OBSERVATION

We observed

the profit maximizing price is \$299
(1,130 people, 15 days)

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

Evidence doesn't support hypothesis

STEP 4: DECISIONS AND ACTIONS

Therefore, we will
