

Now that you have a classification system, you should think about the level on which different companies compete. Are they at the "oblivious", "beginners", "masters", or "invincible" level?

Try your assessment skills on three examples: renowned innovators 3M, Google, GoPro, and your company. At which level is each one of these companies competing?

- **3M** - Best known for their post-it notes, 3M is famous for being one of the world's most innovative companies. The company is extremely diversified and generates \$30 billion in sales from more than 55,000 products. 3M's mission is transforming new ideas into thousands of ingenious products.
- **Google** - The poster child of innovation in the 21st century. They are disrupting one industry after the other. With Google Apps they are making Microsoft's life very hard. With free Google Maps they put several map makers out of business and with Android they built the leading mobile phone operating system.
- **GoPro** - GoPro is a high-profile, California-based camera company that's etched out a very big niche for itself in action sports. Launched in 2004, the company now employs around 500 people around the world. Foxconn, the contract manufacturer, purchased 8.88% of the company for \$200 million in late 2012, setting the market value of the company at \$2.25 billion.
- **Your Company** - How do you perform on business model competition? Are you among the "oblivious" or the "invincible"?
