

Use the Strategy Canvas from the Blue Ocean Strategy book to plot the performance of your value proposition against those of your competitors.

To do this exercise:

- Retrieve your Value Proposition Canvas and focus on the Value Map (the left-hand side of the canvas).
- **Draw a Strategy Canvas on a big sheet of paper or whiteboard**
 - Draw a horizontal axis (x-axis) to represent your factors of competition, and a vertical axis (y-axis) to represent the performance of a value proposition. Add a scale from zero to 10.
- **Select the factors of competition** - Pick the pain relievers and gain creators you want to compare with competitors and place them on the x-axis. These are the factors of competition in your Strategy Canvas.
- **Score your value proposition** - Give each factor of competition a score from zero to 10.
- **Add competing value propositions** - Choose those that are most representative of the competition out there. They will most likely compete on the same pain relievers and gain creators as your value proposition.
- **Score competing value propositions** - Plot how competing value propositions perform just as you did for your own.
- **Analyze your sweet spot** - Analyze the curves and uncover opportunities. Ask yourself if and how you are differentiating from competitors with your value proposition.
