

STEP 6 OF 9

Exercise: Design your Experiments with the Test Card

🕒 20 min

STEP DOWNLOADS

📄 [Test Card](#)

Structure all of your experiments with this simple Test Card. Start by designing tests for the most critical hypothesis.

1. Download the Test Card on the left panel.
2. Select a high-priority hypothesis you need to test.
3. Start by outlining the experiment you are going to design to verify if the hypothesis is correct or needs to be rejected and revised (test). Then define what data you are going to measure (metric). Lastly, define a target threshold to validate or invalidate the tested hypothesis (criteria).
4. Repeat by designing tests for all of the most critical hypotheses.
5. Ask yourself:
 - Do you have a test for the top three most critical hypotheses?
 - Will your tests produce results quickly and cheaply?
 - Can any of your tests be made smaller or split into multiple tests?
 - Are your tests clearly measurable?
