 [Learning Card](#)

Now that you've extracted your hypotheses and created Test Cards, it's time to get out of the building and run experiments.

1. Start performing the experiments at the top of your list.
2. Capture your insights with the [Learning Card](#).
3. If your hypotheses are invalid, get back to the drawing board and pivot. Find new alternative segments or value propositions to make your idea work when your tests invalidate your first attempts.
4. If your hypotheses are valid, expand your experiments to the next building block. Move on to test your next important hypothesis when you are satisfied with your insights and the data reliability.

This is just the beginning of a long journey. Keep your eyes on the prize and make sure you are progressing. Track whether you are advancing from your initial idea toward a profitable and scalable business.

Interested in learning more about the testing and validation process? The [Strategyzer Innovation Sprint](#) helps you address the challenges of a fast-changing business environment, increased competition, and demanding customers in a structured 10-week process with dedicated coaching and weekly check-ins.
